EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Loren Pearson (Reg. # 42,987) on 07/22/04.

The application has been amended as follows:

Claim 1 (currently amended) A method for treating fatty acids comprising:
adding an iodine catalyst selected from the group consisting of iodine (I₂) and iron iodine (FeI₂) to a fatty acid, which contains polyunsaturated components, to form a mixture; heating said mixture to cause conjugation of said polyunsaturated components;
further reacting said mixture under heat with the addition of a polymerization catalyst to cause polymerization of the conjugated polyunsaturated components to produce a composition containing about 100% by weight of a mixture of linoleic dimer/trimer acids and oleic acid;
and recovering, based on the weight of the starting material, at least 50% or more oleic acid from said composition.

In claim 11, line 2, delete the word "further".

In claim 13, line 2, delete the word "further".

Claims 20-27 have been canceled.

2. The following is an examiner's statement of reasons for allowance: Support for the above examiner's amendment is found in claims 20 and 27 both now canceled, and within the examples that disclose polymerization of the conjugated polyunsaturated components to produce a composition containing about 100% by weight of a mixture of linoleic dimer/trimer acids and oleic acid.

The examiner's amendment inserting the limitation of wherein the added iodine catalyst is selected from the group consisting of iodine (I_2) and iron iodine (FeI_2) was done to overcome the previously applied Ralston patent which uses amine hydroiodides as the conjugation catalyst and teaches against the use of other catalyst such as ferrous iodide as conjugation catalyst, see column 2, line 32 to column 3, line 13.

The examiner's amendment inserting the limitations of about 100% by weight of a mixture of, and based on the weight of the starting material, at least 50% or more, were made to overcome the previously applied Matsuo et al. Patent as a primary reference because Matsuo et al clearly neither teaches or suggests a disproportionate reaction of fatty acids that would result in sufficient

C18 conjugated diene acids that could subsequently be polymerized, as suggest by the applied secondary references, to meet said newly added, by the above examiner's amendment, concentration limitations, see column 7 and Table 3 of Matsuo et al..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner Information

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Joseph D. Anthony whose telephone number is (571) 272-1117. This examiner can normally be reached on Monday through Thursday from 8:00 a.m. to 6:30 p.m. in the eastern time zone. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Vasu Jagannathan, can be reached on (571) 272-1119. The centralized FAX machine number is (703) 872-9306. All other papers received by FAX will be treated as Official communications and cannot be immediately handled by the Examiner.
